

## 2008 英语 (一) Part A · Text3

|      |                           |
|------|---------------------------|
| 文章主题 | 美国人的平均身高已接近遗传与环境条件所允许的上限  |
| 限时阶段 | 18-22 分钟：先看题干，不看选项；读文不查词  |
| 笔译阶段 | 按段笔译、按段核对；先写粗译，不追求参考译文式中文 |
| 重做阶段 | 全文核对完成后，统一重做 31-35 题      |
| 第二天  | 遮住译文重读、重做题、复查错因与替换词       |

保留三次原文使用机会：连续干净原文用于检测；笔译页用于逐段输出；原文修改页用于在英文上订正。答案与解析请对照你的纸质版。

### 限时第一读：先看 5 个英文题干，不看选项

| No. | Question stem - English only                                                  | My signal |
|-----|-------------------------------------------------------------------------------|-----------|
| 31  | Wilt Chamberlain is cited as an example to                                    |           |
| 32  | Which of the following plays a key role in body growth according to the text? |           |
| 33  | On which of the following statements would the author most probably agree?    |           |
| 34  | We learn from the last paragraph that in the near future                      |           |
| 35  | The text intends to tell us that                                              |           |

标出生词但不停下；标出转折/因果/让步；读到相关段落才回来看该题选项。不查词，不看译文，不看解析。

## 我的英文题干导航标记

## 2

2 干净原文 A：限时读文

现在开始计时。此处没有结构、词义或逻辑提示；读到相应段落，就做相应题目。

**[P1]** In the early 1960s Wilt Chamberlain was one of the only three players in the National Basketball Association (NBA) listed at over seven feet. If he had played last season, however, he would have been one of 42. The bodies playing major professional sports have changed dramatically over the years, and managers have been more than willing to adjust team uniforms to fit the growing numbers of bigger, longer frames.

**[P2]** The trend in sports, though, may be obscuring an unrecognized reality: Americans have generally stopped growing. Though typically about two inches taller now than 140 years ago, today's people—especially those born to families who have lived in the U.S. for many generations—apparently reached their limit in the early 1960s. And they aren't likely to get any taller. 'In the general population today, at this genetic, environmental level, we've pretty much gone as far as we can go,' says anthropologist William Cameron Chumlea of Wright State University. In the case of NBA players, their increase in height appears to result from the increasingly common practice of recruiting players from all over the world.

**[P3]** Growth, which rarely continues beyond the age of 20, demands calories and nutrients—notably, protein—to feed expanding tissues. At the start of the 20th century, under-nutrition and childhood infections got in the way. But as diet and health improved, children and adolescents have, on average, increased in height by about an inch and a half every 20 years, a pattern known as the secular trend in height. Yet according to the Centers for Disease Control and Prevention, average height—5'9" for men, 5'4" for women—hasn't really changed since 1960.

**[P4]** Genetically speaking, there are advantages to avoiding substantial height. During childbirth, larger babies have more difficulty passing through the birth canal. Moreover, even though humans have been upright for millions of years, our feet and back continue to struggle with bipedal posture and cannot easily withstand repeated strain imposed by oversized limbs. ‘There are some real constraints that are set by the genetic architecture of the individual organism,’ says anthropologist William Leonard of Northwestern University.

**[P5]** Genetic maximums can change, but don't expect this to happen soon. Claire C. Gordon, senior anthropologist at the Army Research Center in Natick, Mass., estimates that 90 percent of the uniforms and workstations fit recruits without alteration. She says that, unlike those for basketball, the length of military uniforms has not changed for some time. And if you need to predict human height in the near future to design a piece of equipment, Gordon says that by and large, 'you could use today's data and feel fairly confident.'

2.2

## 第一次做题：作答 31-35 题

现在才看选项。先独立完成五道题；需要时回原文定位。

**31. Wilt Chamberlain is cited as an example to**

- [A] illustrate the change of height of NBA players.
- [B] show the popularity of NBA players in the U.S..
- [C] compare different generations of NBA players.
- [D] assess the achievements of famous NBA players.

**32. Which of the following plays a key role in body growth according to the text?**

- [A] Genetic modification.
- [B] Natural environment.
- [C] Living standards.
- [D] Daily exercise.

**33. On which of the following statements would the author most probably agree?**

- [A] Non-Americans add to the average height of the nation.
- [B] Human height is conditioned by the upright posture.
- [C] Americans are the tallest on average in the world.
- [D] Larger babies tend to become taller in adulthood.

**34. We learn from the last paragraph that in the near future**

- [A] the garment industry will reconsider the uniform size.
- [B] the design of military uniforms will remain unchanged.
- [C] genetic testing will be employed in selecting sportsmen.
- [D] the existing data of human height will still be applicable.

**35. The text intends to tell us that**

- [A] the change of human height follows a cyclic pattern.
- [B] human height is becoming even more predictable.
- [C] Americans have reached their genetic growth limit.
- [D] the genetic pattern of Americans has altered.

### 3.1

## 第 1 段：逐句笔译与原文订正

直接在英文上标记主干和逻辑；长句留两行，短句留一行。

**S1** In the early 1960s Wilt Chamberlain was one of the only three players in the National Basketball Association (NBA) listed at over seven feet.

**S2** If he had played last season, however, he would have been one of 42.

**S3** The bodies playing major professional sports have changed dramatically over the years, and managers have been more than willing to adjust team uniforms to fit the growing numbers of bigger, longer frames.

**本段英语原文（按句分行）**

## 全文核对后：正式重做 31-35 题

再次独立作答。只看题干和选项；需要时回原文圈出定位句。

**31. Wilt Chamberlain is cited as an example to**

- [A] illustrate the change of height of NBA players.
- [B] show the popularity of NBA players in the U.S..
- [C] compare different generations of NBA players.
- [D] assess the achievements of famous NBA players.

**32. Which of the following plays a key role in body growth according to the text?**

- [A] Genetic modification.
- [B] Natural environment.
- [C] Living standards.
- [D] Daily exercise.

**33. On which of the following statements would the author most probably agree?**

- [A] Non-Americans add to the average height of the nation.
- [B] Human height is conditioned by the upright posture.
- [C] Americans are the tallest on average in the world.
- [D] Larger babies tend to become taller in adulthood.

**34. We learn from the last paragraph that in the near future**

- [A] the garment industry will reconsider the uniform size.
- [B] the design of military uniforms will remain unchanged.
- [C] genetic testing will be employed in selecting sportsmen.
- [D] the existing data of human height will still be applicable.

**35. The text intends to tell us that**

- [A] the change of human height follows a cyclic pattern.
- [B] human height is becoming even more predictable.
- [C] Americans have reached their genetic growth limit.
- [D] the genetic pattern of Americans has altered.

## 5 原文 D: 第二次做题后定位

先不看解析，回原文再找一次定位句和同义替换。

**[P1]** In the early 1960s Wilt Chamberlain was one of the only three players in the National Basketball Association (NBA) listed at over seven feet. If he had played last season, however, he would have been one of 42. The bodies playing major professional sports have changed dramatically over the years, and managers have been more than willing to adjust team uniforms to fit the growing numbers of bigger, longer frames.

**[P2]** The trend in sports, though, may be obscuring an unrecognized reality: Americans have generally stopped growing. Though typically about two inches taller now than 140 years ago, today's people—especially those born to families who have lived in the U.S. for many generations—apparently reached their limit in the early 1960s. And they aren't likely to get any taller. 'In the general population today, at this genetic, environmental level, we've pretty much gone as far as we can go,' says anthropologist William Cameron Chumlea of Wright State University. In the case of NBA players, their increase in height appears to result from the increasingly common practice of recruiting players from all over the world.

**[P3]** Growth, which rarely continues beyond the age of 20, demands calories and nutrients—notably, protein—to feed expanding tissues. At the start of the 20th century, under-nutrition and childhood infections got in the way. But as diet and health improved, children and adolescents have, on average, increased in height by about an inch and a half every 20 years, a pattern known as the secular trend in height. Yet according to the Centers for Disease Control and Prevention, average height—5'9" for men, 5'4" for women—hasn't really changed since 1960.

**[P4]** Genetically speaking, there are advantages to avoiding substantial height. During childbirth, larger babies have more difficulty passing through the birth canal. Moreover, even though humans have been upright for millions of years, our feet and back continue to struggle with bipedal posture and cannot easily withstand repeated strain imposed by oversize limbs. 'There are some real constraints that are set by the genetic architecture of the individual organism,' says anthropologist William Leonard of Northwestern University.

**[P5]** Genetic maximums can change, but don't expect this to happen soon. Claire C. Gordon, senior anthropologist at the Army Research Center in Natick, Mass., estimates that 90 percent of the uniforms and workstations fit recruits without alteration. She says that, unlike those for basketball, the length of military uniforms has not changed for some time. And if you need to predict human height in the near future to design a piece of equipment, Gordon says that by and large, 'you could use today's data and feel fairly confident.'
