

2009 英语 (一) Part A · Text 3

精读全流程：原文、做题、笔译、订正、重做、选项与复读

文章主题	通读后用一句话自行概括
限时阶段	18-22 分钟：先看题干，不看选项；读文不查词
笔译阶段	按段笔译、按段核对；先写粗译，不追求参考译文式中文
重做阶段	全文核对完成后，统一重做 31-35 题
第二天	遮住译文重读、重做题、复查错因与替换词

连续干净原文用于真实检测；笔译原文用于逐段输出；原文修改页用于在英文上订正。答案与解析请对照纸质版。

1

1 限时第一读：先看 5 个英文题干，不看选项

用 1-2 分钟建立阅读导航；圈出特殊定位词与题型信号，不分析答案。

No.	Question stem - English only	Signal
31	The author holds in Paragraph 1 that the importance of education in poor countries	
32	It is stated in Paragraph 1 that the construction of a new educational system	
33	A major difference between the Japanese and U.S. workforces is that	
34	The author quotes the example of our ancestors to show that education emerged	
35	According to the last paragraph, development of education	

这一阶段只做三件事

标出生词但不停下；标出转折/因果/让步；读到相关段落才回来看选项。

2 干净原文 A：限时读文

现在开始计时。此处没有结构、词义或逻辑提示；读到相应段落，就做相应题目。

[P1] The relationship between formal education and economic growth in poor countries is widely misunderstood by economists and politicians alike. Progress in both areas is undoubtedly necessary for the social, political, and intellectual development of these and all other societies; however, the conventional view that education should be one of the very highest priorities for promoting rapid economic development in poor countries is wrong. We are fortunate that it is, because building new educational systems there and putting enough people through them to improve economic performance would require two or three generations. The findings of a research institution have consistently shown that workers in all countries can be trained on the job to achieve radically higher productivity and, as a result, radically higher standards of living.

[P2] Ironically, the first evidence for this idea appeared in the United States. Not long ago, with the country entering a recession and Japan at its pre-bubble peak, the U.S. workforce was derided as poorly educated and one of the primary causes of the poor U.S. economic performance. Japan was, and remains, the global leader in automotive-assembly productivity. Yet the research revealed that the U.S. factories of Honda, Nissan, and Toyota achieved about 95 percent of the productivity of their Japanese counterparts—a result of the training that U.S. workers received on the job.

[P3] More recently, while examining housing construction, the researchers discovered that illiterate, non-English-speaking Mexican workers in Houston, Texas, consistently met best-practice labor productivity standards despite the complexity of the building industry's work.

[P4] What is the real relationship between education and economic development? We have to suspect that continuing economic growth promotes the development of education even when governments don't force it. After all, that's how education got started. When our ancestors were hunters and gatherers 10,000 years ago, they didn't have time to wonder much about anything besides finding food. Only when humanity began to get its food in a more productive way was there time for other things.

[P5] As education improved, humanity's productivity potential increased as well. When the competitive environment pushed our ancestors to achieve that potential, they could in turn afford more education. This increasingly high level of education is probably a necessary, but not a sufficient, condition for the complex political systems required by advanced economic performance. Thus poor countries might not be able to escape their poverty traps without political changes that may be possible only with broader formal education. A lack of formal education, however, doesn't constrain the ability of the developing world's workforce to substantially improve productivity for the foreseeable future. On the contrary, constraints on improving productivity explain why education isn't developing more quickly there than it is.

2.2

第一次做题：作答 31-35 题

现在才看选项。先独立完成五道题；需要时回原文定位。

31. The author holds in Paragraph 1 that the importance of education in poor countries

- [A] is subject to groundless doubts.
- [B] has fallen victim of bias.
- [C] is conventionally downgraded.
- [D] has been overestimated.

32. It is stated in Paragraph 1 that the construction of a new educational system

- [A] challenges economists and politicians.
- [B] takes efforts of generations.
- [C] demands priority from the government.
- [D] requires sufficient labor force.

33. A major difference between the Japanese and U.S. workforces is that

- [A] the Japanese workforce is better disciplined.
- [B] the Japanese workforce is more productive.
- [C] the U.S. workforce has a better education.
- [D] the U.S. workforce is more organized.

34. The author quotes the example of our ancestors to show that education emerged

- [A] when people had enough time.
- [B] prior to better ways of finding food.
- [C] when people no longer went hungry.
- [D] as a result of pressure on government.

35. According to the last paragraph, development of education

- [A] results directly from competitive environments.
- [B] does not depend on economic performance.
- [C] follows improved productivity.
- [D] cannot afford political changes.

全文核对后：正式重做 31-35 题

再次独立作答。只看题干和选项；需要时回原文圈出定位句。

31. The author holds in Paragraph 1 that the importance of education in poor countries

- [A] is subject to groundless doubts.
- [B] has fallen victim of bias.
- [C] is conventionally downgraded.
- [D] has been overestimated.

32. It is stated in Paragraph 1 that the construction of a new educational system

- [A] challenges economists and politicians.
- [B] takes efforts of generations.
- [C] demands priority from the government.
- [D] requires sufficient labor force.

33. A major difference between the Japanese and U.S. workforces is that

- [A] the Japanese workforce is better disciplined.
- [B] the Japanese workforce is more productive.
- [C] the U.S. workforce has a better education.
- [D] the U.S. workforce is more organized.

34. The author quotes the example of our ancestors to show that education emerged

- [A] when people had enough time.
- [B] prior to better ways of finding food.
- [C] when people no longer went hungry.
- [D] as a result of pressure on government.

35. According to the last paragraph, development of education

- [A] results directly from competitive environments.
- [B] does not depend on economic performance.
- [C] follows improved productivity.
- [D] cannot afford political changes.

5 原文 D：第二次做题后定位

先看解析，回原文再找一次定位句和同义替换。

[P1] The relationship between formal education and economic growth in poor countries is widely misunderstood by economists and politicians alike. Progress in both areas is undoubtedly necessary for the social, political, and intellectual development of these and all other societies; however, the conventional view that education should be one of the very highest priorities for promoting rapid economic development in poor countries is wrong. We are fortunate that it is, because building new educational systems there and putting enough people through them to improve economic performance would require two or three generations. The findings of a research institution have consistently shown that workers in all countries can be trained on the job to achieve radically higher productivity and, as a result, radically higher standards of living.

[P2] Ironically, the first evidence for this idea appeared in the United States. Not long ago, with the country entering a recession and Japan at its pre-bubble peak, the U.S. workforce was derided as poorly educated and one of the primary causes of the poor U.S. economic performance. Japan was, and remains, the global leader in automotive-assembly productivity. Yet the research revealed that the U.S. factories of Honda, Nissan, and Toyota achieved about 95 percent of the productivity of their Japanese counterparts—a result of the training that U.S. workers received on the job.

[P3] More recently, while examining housing construction, the researchers discovered that illiterate, non-English-speaking Mexican workers in Houston, Texas, consistently met best-practice labor productivity standards despite the complexity of the building industry's work.

[P4] What is the real relationship between education and economic development? We have to suspect that continuing economic growth promotes the development of education even when governments don't force it. After all, that's how education got started. When our ancestors were hunters and gatherers 10,000 years ago, they didn't have time to wonder much about anything besides finding food. Only when humanity began to get its food in a more productive way was there time for other things.

[P5] As education improved, humanity's productivity potential increased as well. When the competitive environment pushed our ancestors to achieve that potential, they could in turn afford more education. This increasingly high level of education is probably a necessary, but not a sufficient, condition for the complex political systems required by advanced economic performance. Thus poor countries might not be able to escape their poverty traps without political changes that may be possible only with broader formal education. A lack of formal education, however, doesn't constrain the ability of the developing world's workforce to substantially improve productivity for the foreseeable future. On the contrary, constraints on improving productivity explain why education isn't developing more quickly there than it is.
