

2010 英语 (一) Part A · Text 3

精读全流程：原文、做题、笔译、订正、重做、选项与复读

文章主题	通读后用一句话自行概括
限时阶段	18-22 分钟：先看题干，不看选项；读文不查词
笔译阶段	按段笔译、按段核对；先写粗译，不追求参考译文式中文
重做阶段	全文核对完成后，统一重做 31-35 题
第二天	遮住译文重读、重做题、复查错因与替换词

连续干净原文用于真实检测；笔译原文用于逐段输出；原文修改页用于在英文上订正。答案与解析请对照纸质版。

限时第一读：先看 5 个英文题干，不看选项

No.	Question stem - English only	Signal
31	By citing the book The Tipping Point, the author intends to	
32	The author suggests that the "two-step-flow theory"	
33	What the researchers have observed recently shows that

现在开始计时。此处没有结构、词义或逻辑提示；读到相应段落，就做相应题目。

[P1] In his book *The Tipping Point*, Malcolm Gladwell argues that "social epidemics" are driven in large part by the actions of a tiny minority of special individuals, often called influentials, who are unusually informed, persuasive, or well connected. The idea is intuitively compelling, but it doesn't explain how ideas actually spread.

[P2] The supposed importance of influentials derives from a plausible-sounding but largely untested theory called the "two-step flow of communication": Information flows from the media to the influentials and from them to everyone else. Marketers have embraced the two-step flow because it suggests that if they can just find and influence the influentials, those select people will do most of the work for them. The theory also seems to explain the sudden and unexpected popularity of certain looks, brands, or neighborhoods. In many such cases, a cursory search for causes finds that some small group of people was wearing, promoting, or developing whatever it is before anyone else paid attention. Anecdotal evidence of this kind fits nicely with the idea that only certain special people can drive trends.

[P3] In their recent work, however, some researchers have come up with the finding that influentials have far less impact on social epidemics than is generally supposed. In fact, they don't seem to be required at all.

[P4] The researchers' argument stems from a simple observation about social influence: With the exception of a few celebrities like Oprah Winfrey—whose outsize presence is primarily a function of media, not interpersonal, influence—even the most influential members of a population simply don't interact with that many others. Yet it is precisely these non-celebrity influentials who, according to the two-step-flow theory, are supposed to drive social epidemics, by influencing their friends and colleagues directly. For a social epidemic to occur, however, each person so affected must then influence his or her own acquaintances, who must in turn influence theirs, and so on; and just how many others pay attention to each of these people has little to do with the initial influential. If people in the network just two degrees removed from the initial influential prove resistant, for example, the cascade of change won't propagate very far or affect many people.

[P5] Building on the basic truth about interpersonal influence, the researchers studied the dynamics of social influence by conducting thousands of computer simulations of populations, manipulating a number of variables relating to people's ability to influence others and their tendency to be influenced. They found that the principal requirement for what is called "global cascades"—the widespread propagation of influence through networks—is the presence not of a few influentials but, rather, of a critical mass of easily influenced people.

第一次做题：作答 31-35 题

现在才看选项。先独立完成五道题；需要时回原文定位。

31. By citing the book *The Tipping Point*, the author intends to

- [A] analyze the consequences of social epidemics.
- [B] discuss influentials' function in spreading ideas.
- [C] exemplify people's intuitive response to social epidemics.
- [D] describe the essential characteristics of influentials.

32. The author suggests that the "two-step-flow theory"

- [A] serves as a solution to marketing problems.
- [B] has helped explain certain prevalent trends.
- [C] has won support from influentials.
- [D] requires solid evidence for its validity.

33. What the researchers have observed recently shows that

- [A] the power of influence goes with social interactions.
- [B] interpersonal links can be enhanced through the media.
- [C] influentials have more channels to reach the public.
- [D] most celebrities enjoy wide media attention.

34. The underlined phrase "these people" in Paragraph 4 refers to the ones who

- [A] stay outside the network of social influence.
- [B] have little contact with the source of influence.
- [C] are influenced and then influence others.
- [D] are influenced by the initial influential.

35. What is the essential element in the dynamics of social influence?

- [A] The eagerness to be accepted.
- [B] The impulse to influence others.
- [C] The readiness to be influenced.
- [D] The inclination to rely on others.

全文核对后：正式重做 31-35 题

再次独立作答。只看题干和选项；需要时回原文圈出定位句。

31. By citing the book *The Tipping Point*, the author intends to

- [A] analyze the consequences of social epidemics.
- [B] discuss influentials' function in spreading ideas.
- [C] exemplify people's intuitive response to social epidemics.
- [D] describe the essential characteristics of influentials.

32. The author suggests that the "two-step-flow theory"

- [A] serves as a solution to marketing problems.
- [B] has helped explain certain prevalent trends.
- [C] has won support from influentials.
- [D] requires solid evidence for its validity.

33. What the researchers have observed recently shows that

- [A] the power of influence goes with social interactions.
- [B] interpersonal links can be enhanced through the media.
- [C] influentials have more channels to reach the public.
- [D] most celebrities enjoy wide media attention.

34. The underlined phrase "these people" in Paragraph 4 refers to the ones who

- [A] stay outside the network of social influence.
- [B] have little contact with the source of influence.
- [C] are influenced and then influence others.
- [D] are influenced by the initial influential.

35. What is the essential element in the dynamics of social influence?

- [A] The eagerness to be accepted.
- [B] The impulse to influence others.
- [C] The readiness to be influenced.
- [D] The inclination to rely on others.

5 原文 D: 第二次做题后定位

先不看解析，回原文再找一次定位句和同义替换。

[P1] In his book *The Tipping Point*, Malcolm Gladwell argues that "social epidemics" are driven in large part by the actions of a tiny minority of special individuals, often called influentials, who are unusually informed, persuasive, or well connected. The idea is intuitively compelling, but it doesn't explain how ideas actually spread.

[P2] The supposed importance of influentials derives from a plausible-sounding but largely untested theory called the "two-step flow of communication": Information flows from the media to the influentials and from them to everyone else. Marketers have embraced the two-step flow because it suggests that if they can just find and influence the influentials, those select people will do most of the work for them. The theory also seems to explain the sudden and unexpected popularity of certain looks, brands, or neighborhoods. In many such cases, a cursory search for causes finds that some small group of people was wearing, promoting, or developing whatever it is before anyone else paid attention. Anecdotal evidence of this kind fits nicely with the idea that only certain special people can drive trends.

[P3] In their recent work, however, some researchers have come up with the finding that influentials have far less impact on social epidemics than is generally supposed. In fact, they don't seem to be required at all.

[P4] The researchers' argument stems from a simple observation about social influence: With the exception of a few celebrities like Oprah Winfrey—whose outsize presence is primarily a function of media, not interpersonal, influence—even the most influential members of a population simply don't interact with that many others. Yet it is precisely these non-celebrity influentials who, according to the two-step-flow theory, are supposed to drive social epidemics, by influencing their friends and colleagues directly. For a social epidemic to occur, however, each person so affected must then influence his or her own acquaintances, who must in turn influence theirs, and so on; and just how many others pay attention to each of these people has little to do with the initial influential. If people in the network just two degrees removed from the initial influential prove resistant, for example, the cascade of change won't propagate very far or affect many people.

[P5] Building on the basic truth about interpersonal influence, the researchers studied the dynamics of social influence by conducting thousands of computer simulations of populations, manipulating a number of variables relating to people's ability to influence others and their tendency to be influenced. They found that the principal requirement for what is called "global cascades"—the widespread propagation of influence through networks—is the presence not of a few influentials but, rather, of a critical mass of easily influenced people.
