

2012 英语 (一) Part A · Text 3

精读全流程：原文、做题、笔译、订正、重做、选项与复读

文章主题	通读后用一句话自行概括
限时阶段	18-22 分钟：先看题干，不看选项；读文不查词
笔译阶段	按段笔译、按段核对；先写粗译，不追求参考译文式中文
重做阶段	全文核对完成后，统一重做 31-35 题
第二天	遮住译文重读、重做题、复查错因与替换词

连续干净原文用于真实检测；笔译原文用于逐段输出；原文修改页用于在英文上订正。答案与解析请对照纸质版。

1

1 限时第一读：先看 5 个英文题干，不看选项

用 1-2 分钟建立阅读导航；圈出特殊定位词与题型信号，不分析答案。

32	It can be inferred from Paragraph 2 that the credibility process requires	
33	Paragraph 3 shows that a discovery claim becomes credible after it	
34	Albert Szent-Györgyi would most likely agree that	
35	Which of the following would be the best title of the text?	

这一阶段只做三件事

标出生词但不停下；标出转折/因果/让步；读到相关段落才回来看选项。

我的英文题干导航标记

干净原文 A：限时读文

现在开始计时。此处没有结构、词义或逻辑提示；读到相应段落，就做相应题目。

[P1] In the idealized version of how science is done, facts about the world are waiting to be observed and collected by objective researchers who use the scientific method to carry out their work. But in the everyday practice of science, discovery frequently follows an ambiguous and complicated route. We aim to be objective, but we cannot escape the context of our unique life experiences. Prior knowledge and interests influence what we experience, what we think our experiences mean, and the subsequent actions we take. Opportunities for misinterpretation, error, and self-deception abound.

[P2] Consequently, discovery claims should be thought of as protoscience. Similar to newly staked mining claims, they are full of potential. But it takes collective scrutiny and acceptance to transform a discovery claim into a mature discovery. This is the credibility process, through which the individual researcher's me, here, now becomes the community's anyone, anywhere, anytime. Objective knowledge is the goal, not the starting point.

[P3] Once a discovery claim becomes public, the discoverer receives intellectual credit. But, unlike with mining claims, the community takes control of what happens next. Within the complex social structure of the scientific community, researchers make discoveries; editors and reviewers act as gatekeepers by controlling the publication process; other scientists use the new finding to suit their own purposes; and finally, the public (including other scientists) receives the new discovery and possibly accompanying technology. As a discovery claim works its way through the community, the interaction and confrontation between shared and competing beliefs about the science and the technology involved transforms an individual's discovery claim into the community's credible discovery.

[P4] Two paradoxes exist throughout this credibility process. First, scientific work tends to focus on some aspect of prevailing knowledge that is viewed as incomplete or incorrect. Little reward accompanies duplication and confirmation of what is already known and believed. The goal is new-search, not re-search. Not surprisingly, newly published discovery claims and credible discoveries that appear to be important and convincing will always be open to challenge and potential modification or refutation by future researchers. Second, novelty itself frequently provokes disbelief. Nobel Laureate and physiologist Albert Szent-Györgyi once described discovery as "seeing what everybody has seen and thinking what nobody has thought." But thinking what nobody else has thought and telling others what they have missed may not change their views. Sometimes years are required for truly novel discovery claims to be accepted and appreciated.

[P5] In the end, credibility "happens" to a discovery claim—a process that corresponds to what philosopher Annette Baier has described as the commons of the mind. "We reason together, challenge, revise, and complete each other's reasoning and each other's conceptions of reason."

2.2

第一次做题：作答 31-35 题

现在才看选项。先独立完成五道题；需要时回原文定位。

31. According to the first paragraph, the process of discovery is characterized by its

- [A] uncertainty and complexity.
- [B] misconception and deceptiveness.
- [C] logicity and objectivity.
- [D] systematicness and regularity.

32. It can be inferred from Paragraph 2 that the credibility process requires

- [A] strict inspection.
- [B] shared efforts.
- [C] individual wisdom.
- [D] persistent innovation.

33. Paragraph 3 shows that a discovery claim becomes credible after it

- [A] has attracted the attention of the general public.
- [B] has been examined by the scientific community.
- [C] has received recognition from editors and reviewers.
- [D] has been frequently quoted by peer scientists.

34. Albert Szent-Györgyi would most likely agree that

- [A] scientific claims will survive challenges.
- [B] discoveries today inspire future research.
- [C] efforts to make discoveries are justified.
- [D] scientific work calls for a critical mind.

35. Which of the following would be the best title of the text?

- [A] Novelty as an Engine of Scientific Development.
- [B] Collective Scrutiny in Scientific Discovery.
- [C] Evolution of Credibility in Doing Science.
- [D] Challenge to Credibility at the Gate to Science.

3.4

第 4 段：逐句笔译与原文订正

直接在英文上标记主干和逻辑；长句留两行，短句留一行。

S1 Two paradoxes exist throughout this credibility process.

S2 First, scientific work tends to focus on some aspect of prevailing knowledge that is viewed as incomplete or incorrect.

S3 Little reward accompanies duplication and confirmation of what is already known and believed.

S4 The goal is new-search, not re-search.

S5 Not surprisingly, newly published discovery claims and credible discoveries that appear to be important and convincing will always be open to challenge and potential modification or refutation by future researchers.

S6 Second, novelty itself frequently provokes disbelief.

S7 Nobel Laureate and physiologist Albert Szent-Györgyi once described discovery as "seeing what everybody has seen and thinking what nobody has thought." But thinking what nobody else has thought and telling others what they have missed may not change their views.

S8 Sometimes years are required for truly novel discovery claims to be accepted and appreciated.

全文核对后：正式重做 31-35 题

再次独立作答。只看题干和选项；需要时回原文圈出定位句。

31. According to the first paragraph, the process of discovery is characterized by its

- [A] uncertainty and complexity.
- [B] misconception and deceptiveness.
- [C] logicity and objectivity.
- [D] systematicness and regularity.

32. It can be inferred from Paragraph 2 that the credibility process requires

- [A] strict inspection.
- [B] shared efforts.
- [C] individual wisdom.
- [D] persistent innovation.

33. Paragraph 3 shows that a discovery claim becomes credible after it

- [A] has attracted the attention of the general public.
- [B] has been examined by the scientific community.
- [C] has received recognition from editors and reviewers.
- [D] has been frequently quoted by peer scientists.

34. Albert Szent-Györgyi would most likely agree that

- [A] scientific claims will survive challenges.
- [B] discoveries today inspire future research.
- [C] efforts to make discoveries are justified.
- [D] scientific work calls for a critical mind.

35. Which of the following would be the best title of the text?

- [A] Novelty as an Engine of Scientific Development.
- [B] Collective Scrutiny in Scientific Discovery.
- [C] Evolution of Credibility in Doing Science.
- [D] Challenge to Credibility at the Gate to Science.

5 原文 D: 第二次做题后定位

先不看解析，回原文再找一次定位句和同义替换。

[P1] In the idealized version of how science is done, facts about the world are waiting to be observed and collected by objective researchers who use the scientific method to carry out their work. But in the everyday practice of science, discovery frequently follows an ambiguous and complicated route. We aim to be objective, but we cannot escape the context of our unique life experiences. Prior knowledge and interests influence what we experience, what we think our experiences mean, and the subsequent actions we take. Opportunities for misinterpretation, error, and self-deception abound.

[P2] Consequently, discovery claims should be thought of as protoscience. Similar to newly staked mining claims, they are full of potential. But it takes collective scrutiny and acceptance to transform a discovery claim into a mature discovery. This is the credibility process, through which the individual researcher's me, here, now becomes the community's anyone, anywhere, anytime. Objective knowledge is the goal, not the starting point.

[P3] Once a discovery claim becomes public, the discoverer receives intellectual credit. But, unlike with mining claims, the community takes control of what happens next. Within the complex social structure of the scientific community, researchers make discoveries; editors and reviewers act as gatekeepers by controlling the publication process; other scientists use the new finding to suit their own purposes; and finally, the public (including other scientists) receives the new discovery and possibly accompanying technology. As a discovery claim works its way through the community, the interaction and confrontation between shared and competing beliefs about the science and the technology involved transforms an individual's discovery claim into the community's credible discovery.

[P4] Two paradoxes exist throughout this credibility process. First, scientific work tends to focus on some aspect of prevailing knowledge that is viewed as incomplete or incorrect. Little reward accompanies duplication and confirmation of what is already known and believed. The goal is new-search, not re-search. Not surprisingly, newly published discovery claims and credible discoveries that appear to be important and convincing will always be open to challenge and potential modification or refutation by future researchers. Second, novelty itself frequently provokes disbelief. Nobel Laureate and physiologist Albert Szent-Györgyi once described discovery as "seeing what everybody has seen and thinking what nobody has thought." But thinking what nobody else has thought and telling others what they have missed may not change their views. Sometimes years are required for truly novel discovery claims to be accepted and appreciated.

[P5] In the end, credibility "happens" to a discovery claim—a process that corresponds to what philosopher Annette Baier has described as the commons of the mind. "We reason together, challenge, revise, and complete each other's reasoning and each other's conceptions of reason."
