

READING DEEP-DIVE WORKBOOK

2018 英语（一） Part A · Text 1

精读全流程：原文、做题、笔译、订正、重做、选项与复读

文章主题	通读后用一句话自行概括
限时阶段	18-22 分钟：先看题干，不看选项；读文不查词
笔译阶段	按段笔译、按段核对；先写粗译，不追求参考译文式中文
重做阶段	全文核对完成后，统一重做 21-25 题
第二天	遮住译文重读、重做题、复查错因与替换词

使用原则
连续干净原文用于真实检测；笔译原文用于逐段输出；原文修改页用于在英文上订正。答案与解析请对照纸质版。

限时第一读：先看 5 个英文题干，不看选项

No.	Question stem - English only	Signal
21	Who will be most threatened by automation?	
22	Which of the following best represents the author's view?	
23	Education in the age of automation should put more emphasis on	
24	The author suggests that tax policies be aimed at	
25	In this text, the author presents a problem with	

标出生词但不停下；标出转折/因果/让步；读到相关段落才回来看选项。

2 干净原文 A：限时读文

现在开始计时。此处没有结构、词义或逻辑提示；读到相应段落，就做相应题目。

[P1] Among the annoying challenges facing the middle class is one that will probably go unmentioned in the next presidential campaign: What happens when the robots come for their jobs?

[P2] Don't dismiss that possibility entirely. About half of U.S. jobs are at high risk of being automated, according to a University of Oxford study, with the middle class disproportionately squeezed. Lower-income jobs like gardening or day care don't appeal to robots. But many middle-class occupations—trucking, financial advice, software engineering—have aroused their interest, or soon will. The rich own the robots, so they will be fine.

[P3] This isn't to be alarmist. Optimists point out that technological upheaval has benefited workers in the past. The Industrial Revolution didn't go so well for Luddites whose jobs were displaced by mechanized looms, but it eventually raised living standards and created more jobs than it destroyed. Likewise, automation should eventually boost productivity, stimulate demand by driving down prices, and free workers from hard, boring work. But in the medium term, middle-class workers may need a lot of help adjusting.

[P4] The first step, as Erik Brynjolfsson and Andrew McAfee argue in *The Second Machine Age*, should be rethinking education and job training. Curriculums—from grammar school to college—should evolve to focus less on memorizing facts and more on creativity and complex communication. Vocational schools should do a better job of fostering problem-solving skills and helping students work alongside robots. Online education can supplement the traditional kind. It could make extra training and instruction affordable. Professionals trying to acquire new skills will be able to do so without going into debt.

[P5] The challenge of coping with automation underlines the need for the U.S. to revive its fading business dynamism: Starting new companies must be made easier. In previous eras of drastic technological change, entrepreneurs smoothed the transition by dreaming up ways to combine labor and machines. The best uses of 3D printers and virtual reality haven't been invented yet. The U.S. needs the new companies that will invent them.

[P6] Finally, because automation threatens to widen the gap between capital income and labor income, taxes and the safety net will have to be rethought. Taxes on low-wage labor need to be cut, and wage subsidies such as the earned income tax credit should be expanded: This would boost incomes, encourage work, reward companies for job creation, and reduce inequality.

[P7] Technology will improve society in ways big and small over the next few years, yet this will be little comfort to those who find their lives and careers upended by automation. Destroying the machines that are coming for our jobs would be nuts. But policies to help workers adapt will be indispensable.

2.2

第一次做题：作答 21-25 题

现在才看选项。先独立完成五道题；需要时回原文定位。

21. Who will be most threatened by automation?

- [A] Leading politicians.
- [B] Low-wage laborers.
- [C] Robot owners.
- [D] Middle-class workers.

22. Which of the following best represents the author's view?

- [A] Worries about automation are in fact groundless.
- [B] Optimists' opinions on new tech find little support.
- [C] Issues arising from automation need to be tackled.
- [D] Negative consequences of new tech can be avoided.

23. Education in the age of automation should put more emphasis on

- [A] creative potential.
- [B] job-hunting skills.
- [C] individual needs.
- [D] cooperative spirit.

24. The author suggests that tax policies be aimed at

- [A] encouraging the development of automation.
- [B] increasing the return on capital investment.
- [C] easing the hostility between rich and poor.
- [D] preventing the income gap from widening.

25. In this text, the author presents a problem with

- [A] opposing views on it.
- [B] possible solutions to it.
- [C] its alarming impacts.
- [D] its major variations.

全文核对后：正式重做 21-25 题

再次独立作答。只看题干和选项；需要时回原文圈出定位句。

21. Who will be most threatened by automation?

- [A] Leading politicians.
- [B] Low-wage laborers.
- [C] Robot owners.
- [D] Middle-class workers.

22. Which of the following best represents the author's view?

- [A] Worries about automation are in fact groundless.
- [B] Optimists' opinions on new tech find little support.
- [C] Issues arising from automation need to be tackled.
- [D] Negative consequences of new tech can be avoided.

23. Education in the age of automation should put more emphasis on

- [A] creative potential.
- [B] job-hunting skills.
- [C] individual needs.
- [D] cooperative spirit.

24. The author suggests that tax policies be aimed at

- [A] encouraging the development of automation.
- [B] increasing the return on capital investment.
- [C] easing the hostility between rich and poor.
- [D] preventing the income gap from widening.

25. In this text, the author presents a problem with

- [A] opposing views on it.
- [B] possible solutions to it.
- [C] its alarming impacts.
- [D] its major variations.

5 原文 D：选项定位勾画

全篇核读后再读一遍原文；直接圈画每道题的定位句、关键词和同义替换。

[P1] Among the annoying challenges facing the middle class is one that will probably go unmentioned in the next presidential campaign: What happens when the robots come for their jobs?

[P2] Don't dismiss that possibility entirely. About half of U.S. jobs are at high risk of being automated, according to a University of Oxford study, with the middle class disproportionately squeezed. Lower-income jobs like gardening or day care don't appeal to robots. But many middle-class occupations—trucking, financial advice, software engineering—have aroused their interest, or soon will. The rich own the robots, so they will be fine.

[P3] This isn't to be alarmist. Optimists point out that technological upheaval has benefited workers in the past. The Industrial Revolution didn't go so well for Luddites whose jobs were displaced by mechanized looms, but it eventually raised living standards and created more jobs than it destroyed. Likewise, automation should eventually boost productivity, stimulate demand by driving down prices, and free workers from hard, boring work. But in the medium term, middle-class workers may need a lot of help adjusting.

[P4] The first step, as Erik Brynjolfsson and Andrew McAfee argue in *The Second Machine Age*, should be rethinking education and job training. Curriculums—from grammar school to college—should evolve to focus less on memorizing facts and more on creativity and complex communication. Vocational schools should do a better job of fostering problem-solving skills and helping students work alongside robots. Online education can supplement the traditional kind. It could make extra training and instruction affordable. Professionals trying to acquire new skills will be able to do so without going into debt.

[P5] The challenge of coping with automation underlines the need for the U.S. to revive its fading business dynamism: Starting new companies must be made easier. In previous eras of drastic technological change, entrepreneurs smoothed the transition by dreaming up ways to combine labor and machines. The best uses of 3D printers and virtual reality haven't been invented yet. The U.S. needs the new companies that will invent them.

[P6] Finally, because automation threatens to widen the gap between capital income and labor income, taxes and the safety net will have to be rethought. Taxes on low-wage labor need to be cut, and wage subsidies such as the earned income tax credit should be expanded: This would boost incomes, encourage work, reward companies for job creation, and reduce inequality.

[P7] Technology will improve society in ways big and small over the next few years, yet this will be little comfort to those who find their lives and careers upended by automation. Destroying the machines that are coming for our jobs would be nuts. But policies to help workers adapt will be indispensable.
