

READING DEEP-DIVE WORKBOOK

2019 英语（一） Part A · Text 3

精读全流程：原文、做题、笔译、订正、重做、选项与复读

文章主题	通读后用一句话自行概括
限时阶段	18-22 分钟：先看题干，不看选项；读文不查词
笔译阶段	按段笔译、按段核对；先写粗译，不追求参考译文式中文
重做阶段	全文核对完成后，统一重做 31-35 题
第二天	遮住译文重读、重做题、复查错因与替换词

使用原则

连续干净原文用于真实检测；笔译原文用于逐段输出；原文修改页用于在英文上订正。答案与解析请对照纸质版。

限时第一读：先看 5 个英文题干，不看选项

干净原文 A：限时读文

[P1] This year marks exactly two centuries since the publication of *Frankenstein; or, The Modern Prometheus*, by Mary Shelley. Even before the invention of the electric light bulb, the author produced a remarkable work of speculative fiction that would foreshadow many ethical questions to be raised by technologies yet to come.

[P3] What is being called artificial general intelligence, machines that would imitate the way humans think, continues to evade scientists. Yet humans remain fascinated by the idea of robots that would look, move, and respond like humans, similar to those recently depicted on popular sci-fi TV series such as "Westworld" and "Humans."

[P4] Just how people think is still far too complex to be understood, let alone reproduced, says David Eagleman, a Stanford University neuroscientist. "We are just in a situation where there are no good theories explaining what consciousness actually is and how you could ever build a machine to get there."

[P5] But that doesn't mean crucial ethical issues involving AI aren't at hand. The coming use of autonomous vehicles, for example, poses thorny ethical questions. Human drivers sometimes must make split-second decisions. Their reactions may be a complex combination of instant reflexes, input from past driving experiences, and what their eyes and ears tell them in that moment. AI "vision" today is not nearly as sophisticated as that of humans. And to anticipate every imaginable driving situation is a difficult programming problem.

[P6] Whenever decisions are based on masses of data, "you quickly get into a lot of ethical questions," notes Tan Kiat How, chief executive of a Singapore-based agency that is helping the government develop a voluntary code for the ethical use of AI. Along with Singapore, other governments and mega-corporations are beginning to establish their own guidelines. Britain is setting up a data ethics center. India released its AI ethics strategy this spring.

[P7] On June 7 Google pledged not to "design or deploy AI" that would cause "overall harm," or to develop AI-directed weapons or use AI for surveillance that would violate international norms. It also pledged not to deploy AI whose use would violate international laws or human rights.

[P8] While the statement is vague, it represents one starting point. So does the idea that decisions made by AI systems should be explainable, transparent, and fair.

[P9] To put it another way: How can we make sure that the thinking of intelligent machines reflects humanity's highest values? Only then will they be useful servants and not Frankenstein's out-of-control monster.

2.2

第一次做题：作答 31-35 题

现在才看选项。先独立完成五道题；需要时回原文定位。

31. Mary Shelley's novel Frankenstein is mentioned because it

- [A] involves some concerns raised by AI today.
- [B] has remained popular for as long as 200 years.
- [C] fascinates AI scientists all over the world.
- [D] has sparked serious ethical controversies.

32. In David Eagleman's opinion, our current knowledge of consciousness

- [A] helps explain artificial intelligence.
- [B] is too limited for us to reproduce it.
- [C] inspires popular sci-fi TV series.
- [D] can be misleading to robot making.

33. The solution to the ethical issues brought by autonomous vehicles

- [A] can hardly ever be found.
- [B] has aroused much curiosity.
- [C] is still beyond our capacity.
- [D] causes little public concern.

34. The author's attitude toward Google's pledges is one of

- [A] contempt.
- [B] skepticism.
- [C] respect.
- [D] affirmation.

35. Which of the following would be the best title for the text?

- [A] The Conscience of AI: Complex But Inevitable
- [B] Frankenstein, the Novel Predicting the Age of AI
- [C] AI's Future: In the Hands of Tech Giants
- [D] AI Shall Be Killers Once Out of Control

全文核对后：正式重做 31-35 题

再次独立作答。只看题干和选项；需要时回原文圈出定位句。

31. Mary Shelley's novel Frankenstein is mentioned because it

- [A] involves some concerns raised by AI today.
- [B] has remained popular for as long as 200 years.
- [C] fascinates AI scientists all over the world.
- [D] has sparked serious ethical controversies.

32. In David Eagleman's opinion, our current knowledge of consciousness

- [A] helps explain artificial intelligence.
- [B] is too limited for us to reproduce it.
- [C] inspires popular sci-fi TV series.
- [D] can be misleading to robot making.

33. The solution to the ethical issues brought by autonomous vehicles

- [A] can hardly ever be found.
- [B] has aroused much curiosity.
- [C] is still beyond our capacity.
- [D] causes little public concern.

34. The author's attitude toward Google's pledges is one of

- [A] contempt.
- [B] skepticism.
- [C] respect.
- [D] affirmation.

35. Which of the following would be the best title for the text?

- [A] The Conscience of AI: Complex But Inevitable
- [B] Frankenstein, the Novel Predicting the Age of AI
- [C] AI's Future: In the Hands of Tech Giants
- [D] AI Shall Be Killers Once Out of Control

5 原文 D：选项定位勾画

全篇核读后再读一遍原文；直接圈画每道题的定位句、关键词和同义替换。

[P1] This year marks exactly two centuries since the publication of *Frankenstein; or, The Modern Prometheus*, by Mary Shelley. Even before the invention of the electric light bulb, the author produced a remarkable work of speculative fiction that would foreshadow many ethical questions to be raised by technologies yet to come.

[P2] Today the rapid growth of artificial intelligence (AI) raises fundamental questions: "What is intelligence, identity, or consciousness? What makes humans humans?"

[P3] What is being called artificial general intelligence, machines that would imitate the way humans think, continues to evade scientists. Yet humans remain fascinated by the idea of robots that would look, move, and respond like humans, similar to those recently depicted on popular sci-fi TV series such as "Westworld" and "Humans."

[P4] Just how people think is still far too complex to be understood, let alone reproduced, says David Eagleman, a Stanford University neuroscientist. "We are just in a situation where there are no good theories explaining what consciousness actually is and how you could ever build a machine to get there."

[P5] But that doesn't mean crucial ethical issues involving AI aren't at hand. The coming use of autonomous vehicles, for example, poses thorny ethical questions. Human drivers sometimes must make split-second decisions. Their reactions may be a complex combination of instant reflexes, input from past driving experiences, and what their eyes and ears tell them in that moment. AI "vision" today is not nearly as sophisticated as that of humans. And to anticipate every imaginable driving situation is a difficult programming problem.

[P6] Whenever decisions are based on masses of data, "you quickly get into a lot of ethical questions," notes Tan Kiat How, chief executive of a Singapore-based agency that is helping the government develop a voluntary code for the ethical use of AI. Along with Singapore, other governments and mega-corporations are beginning to establish their own guidelines. Britain is setting up a data ethics center. India released its AI ethics strategy this spring.

[P7] On June 7 Google pledged not to "design or deploy AI" that would cause "overall harm," or to develop AI-directed weapons or use AI for surveillance that would violate international norms. It also pledged not to deploy AI whose use would violate international laws or human rights.

[P8] While the statement is vague, it represents one starting point. So does the idea that decisions made by AI systems should be explainable, transparent, and fair.

[P9] To put it another way: How can we make sure that the thinking of intelligent machines reflects humanity's highest values? Only then will they be useful servants and not Frankenstein's out-of-control monster.
