

2020 英语 (一) Part A · Text 2

精读全流程：原文、做题、笔译、订正、重做、选项与复读

文章主题	通读后用一句话自行概括
限时阶段	18-22 分钟：先看题干，不看选项；读文不查词
笔译阶段	按段笔译、按段核对；先写粗译，不追求参考译文式中文
重做阶段	全文核对完成后，统一重做 26-30 题
第二天	遮住译文重读、重做题、复查错因与替换词

连续干净原文用于真实检测；笔译原文用于逐段输出；原文修改页用于在英文上订正。答案与解析请对照纸质版。

1

1 限时第一读：先看 5 个英文题干，不看选项

用 1-2 分钟建立阅读导航；圈出特殊定位词与题型信号，不分析答案。

No.	Question stem – English only	Signal
26	Scientific publishing is seen as "a licence to print money" partly because

2 干净原文 A：限时读文

现在开始计时。此处没有结构、词义或逻辑提示；读到相应段落，就做相应题目。

[P1] Scientific publishing has long been a licence to print money. Scientists need journals in which to publish their research, so they will supply the articles without monetary reward. Other scientists perform the specialised work of peer review also for free, because it is a central element in the acquisition of status and the production of scientific knowledge.

[P2] With the content of papers secured for free, the publisher needs only to find a market for its journal. Until this century, university libraries were not very price sensitive. Scientific publishers routinely report profit margins approaching 40% on their operations, at a time when the rest of the publishing industry is in an existential crisis.

[P3] The Dutch giant Elsevier, which claims to publish 25% of the scientific papers produced in the world, made profits of more than \$900m last year, while UK universities alone spent more than \$210m in 2016 to enable researchers to access their own publicly funded research; both figures seem to rise unstoppably despite increasingly desperate efforts to change them.

[P4] The most drastic, and thoroughly illegal, reaction has been the emergence of Sci-Hub, a kind of global photocopier for scientific papers, set up in 2012, which now claims to offer access to every paywalled article published since 2015. The success of Sci-Hub, which relies on researchers passing on copies they have themselves legally accessed, shows the legal ecosystem has lost legitimacy among its users and must be transformed so that it works for all participants.

[P5] In Britain the move towards open access publishing has been driven by funding bodies. In some ways it has been very successful. More than half of all British scientific research is now published under open access terms: either freely available from the moment of publication, or paywalled for a year or more so that the publishers can make a profit before being placed on general release.

[P6] Yet the new system has not worked out any cheaper for the universities. Publishers have responded to the demand that they make their product free to readers by charging their writers fees to cover the costs of preparing an article. These range from around \$500 to \$5,000. A report last year pointed out that the costs both of subscriptions and of these "article preparation costs" had been steadily rising at a rate above inflation. In some ways the scientific publishing model resembles the economy of the social Internet: labour is provided free in exchange for the hope of status, while huge profits are made by a few big firms who run the market places. In both cases, we need a rebalancing of power.

第一次做题：作答 26-30 题

现在才看选项。先独立完成五道题；需要时回原文定位。

26. Scientific publishing is seen as "a licence to print money" partly because

- [A] its funding has enjoyed a steady increase.
- [B] its marketing strategy has been successful.
- [C] its payment for peer review is reduced.
- [D] its content acquisition costs nothing.

27. According to Paragraphs 2 and 3, scientific publishers like Elsevier have

- [A] thrived mainly on university libraries.
- [B] gone through an existential crisis.
- [C] revived the publishing industry.
- [D] financed researchers generously.

28. How does the author feel about the success of Sci-Hub?

- [A] Relieved.
- [B] Puzzled.
- [C] Concerned.
- [D] Encouraged.

29. It can be learned from Paragraphs 5 and 6 that open access terms

- [A] allow publishers some room to make money.
- [B] render publishing much easier for scientists.
- [C] reduce the cost of publication substantially.
- [D] free universities from financial burdens.

30. Which of the following characterises the scientific publishing model?

- [A] Trial subscription is offered.
- [B] Labour triumphs over status.
- [C] Costs are well controlled.
- [D] The few feed on the many.

全文核对后：正式重做 26-30 题

再次独立作答。只看题干和选项；需要时回原文圈出定位句。

26. Scientific publishing is seen as "a licence to print money" partly because

- [A] its funding has enjoyed a steady increase.
- [B] its marketing strategy has been successful.
- [C] its payment for peer review is reduced.
- [D] its content acquisition costs nothing.

27. According to Paragraphs 2 and 3, scientific publishers like Elsevier have

- [A] thrived mainly on university libraries.
- [B] gone through an existential crisis.
- [C] revived the publishing industry.
- [D] financed researchers generously.

28. How does the author feel about the success of Sci-Hub?

- [A] Relieved.
- [B] Puzzled.
- [C] Concerned.
- [D] Encouraged.

29. It can be learned from Paragraphs 5 and 6 that open access terms

- [A] allow publishers some room to make money.
- [B] render publishing much easier for scientists.
- [C] reduce the cost of publication substantially.
- [D] free universities from financial burdens.

30. Which of the following characterises the scientific publishing model?

- [A] Trial subscription is offered.
- [B] Labour triumphs over status.
- [C] Costs are well controlled.
- [D] The few feed on the many.

5 原文 D：选项定位勾画

全篇核对后再读一遍原文；直接圈画每道题的定位句、关键词和同义替换。

[P1] Scientific publishing has long been a licence to print money. Scientists need journals in which to publish their research, so they will supply the articles without monetary reward. Other scientists perform the specialised work of peer review also for free, because it is a central element in the acquisition of status and the production of scientific knowledge.

[P2] With the content of papers secured for free, the publisher needs only to find a market for its journal. Until this century, university libraries were not very price sensitive. Scientific publishers routinely report profit margins approaching 40% on their operations, at a time when the rest of the publishing industry is in an existential crisis.

[P3] The Dutch giant Elsevier, which claims to publish 25% of the scientific papers produced in the world, made profits of more than \$900m last year, while UK universities alone spent more than \$210m in 2016 to enable researchers to access their own publicly funded research; both figures seem to rise unstopably despite increasingly desperate efforts to change them.

[P4] The most drastic, and thoroughly illegal, reaction has been the emergence of Sci-Hub, a kind of global photocopier for scientific papers, set up in 2012, which now claims to offer access to every paywalled article published since 2015. The success of Sci-Hub, which relies on researchers passing on copies they have themselves legally accessed, shows the legal ecosystem has lost legitimacy among its users and must be transformed so that it works for all participants.

[P5] In Britain the move towards open access publishing has been driven by funding bodies. In some ways it has been very successful. More than half of all British scientific research is now published under open access terms: either freely available from the moment of publication, or paywalled for a year or more so that the publishers can make a profit before being placed on general release.

[P6] Yet the new system has not worked out any cheaper for the universities. Publishers have responded to the demand that they make their product free to readers by charging their writers fees to cover the costs of preparing an article. These range from around \$500 to \$5,000. A report last year pointed out that the costs both of subscriptions and of these "article preparation costs" had been steadily rising at a rate above inflation. In some ways the scientific publishing model resembles the economy of the social Internet: labour is provided free in exchange for the hope of status, while huge profits are made by a few big firms who run the market places. In both cases, we need a rebalancing of power.
