

2022 英语 (一) Part A · Text 1

精读全流程：原文、做题、笔译、订正、重做、选项与复读

文章主题	通读后用一句话自行概括
限时阶段	18-22 分钟：先看题干，不看选项；读文不查词
笔译阶段	按段笔译、按段核对；先写粗译，不追求参考译文式中文
重做阶段	全文核对完成后，统一重做 21-25 题
第二天	遮住译文重读、重做题、复查错因与替换词

连续干净原文用于真实检测；笔译原文用于逐段输出；原文修改页用于在英文上订正。答案与解析请对照纸质版。

1

1 限时第一读：先看 5 个英文题干，不看选项

用 1-2 分钟建立阅读导航；圈出特殊定位词与题型信号，不分析答案。

21	According to Paragraph 1, museums are faced with difficulties in	
22	Van Oosten believes that certain plastic objects are	
23	Museums stopped exhibiting some of Gilardi's artworks to	
24	The author thinks that preservation of plastics is	
25	In Ferreira's opinion, preservation of plastic artifacts	

这一阶段只做三件事

标出生词但不停下；标出转折/因果/让步；读到相关段落才回来看选项。

我的英文题干导航标记

干净原文 A：限时读文

现在开始计时。此处没有结构、词义或逻辑提示；读到相应段落，就做相应题目。

[P1] People often complain that plastics are too durable. Water bottles, shopping bags, and other trash litter the planet, from Mount Everest to the Mariana Trench, because plastics are everywhere and don't break down easily. But some plastic materials change over time. They crack and frizzle. They "weep" out additives. They melt into sludge. All of which creates huge headaches for institutions, such as museums, trying to preserve culturally important objects. The variety of plastic objects at risk is dizzying: early radios, avant-garde sculptures, celluloid animation stills from Disney films, the first artificial heart.

[P2] Certain artifacts are especially vulnerable because some pioneers in plastic art didn't always know how to mix ingredients properly, says Thea van Oosten, a polymer chemist who, until retiring a few years ago, worked for decades at the Cultural Heritage Agency of the Netherlands. "It's like baking a cake: If you don't have exact amounts, it goes wrong," she says. "The object you make is already a time bomb."

[P3] And sometimes, it's not the artist's fault. In the 1960s, the Italian artist Piero Gilardi began to create hundreds of bright, colorful foam pieces. Those pieces included small beds of roses and other items as well as a few dozen "nature carpets"—large rectangles decorated with foam pumpkins, cabbages, and watermelons. He wanted viewers to walk around on the carpets—which meant they had to be durable.

[P4] Unfortunately, the polyurethane foam he used is inherently unstable. It's especially vulnerable to light damage, and by the mid-1990s, Gilardi's pumpkins, roses, and other figures were splitting and crumbling. Museums locked some of them away in the dark.

[P5] So van Oosten and her colleagues worked to preserve Gilardi's sculptures. They infused some with stabilizing and consolidating chemicals. Van Oosten calls those chemicals "sunscreens" because their goal was to prevent further light damage and rebuild worn polymer fibers. She is proud that several sculptures have even gone on display again, albeit sometimes beneath protective cases.

[P6] Despite success stories like van Oosten's, preservation of plastics will likely get harder. Old objects continue to deteriorate. Worse, biodegradable plastics, designed to disintegrate, are increasingly common.

[P7] And more is at stake here than individual objects. Joana Lia Ferreira, an assistant professor of conservation and restoration at the NOVA School of Science and Technology, notes that archaeologists first defined the great material ages of human history—Stone Age, Iron Age, and so on—after examining artifacts in museums. We now live in an age of plastic, she says, "and what we decide to collect today, what we decide to preserve...will have a strong impact on how in the future we'll be seen."

2.2

第一次做题：作答 21-25 题

现在才看选项。先独立完成五道题；需要时回原文定位。

21. According to Paragraph 1, museums are faced with difficulties in

- [A] maintaining their plastic items.
- [B] obtaining durable plastic artifacts.
- [C] handling outdated plastic exhibits.
- [D] classifying their plastic collections.

22. Van Oosten believes that certain plastic objects are

- [A] immune to decay.
- [B] improperly shaped.
- [C] inherently flawed.
- [D] complex in structure.

23. Museums stopped exhibiting some of Gilardi's artworks to

- [A] keep them from hurting visitors.
- [B] duplicate them for future display.
- [C] have their ingredients analyzed.
- [D] prevent them from further damage.

24. The author thinks that preservation of plastics is

- [A] costly.
- [B] unworthy.
- [C] unpopular.
- [D] challenging.

25. In Ferreira's opinion, preservation of plastic artifacts

- [A] will inspire future scientific research.
- [B] has profound historical significance.
- [C] will help us separate the material ages.
- [D] has an impact on today's cultural life.

第 1 段：逐句笔译与原文订正

直接在英文上标记主干和逻辑；长句留两行，短句留一行。

S1 People often complain that plastics are too durable.

S2 Water bottles, shopping bags, and other trash litter the planet, from Mount Everest to the Mariana Trench, because plastics are everywhere and don't break down easily.

S3 But some plastic materials change over time.

S4 They crack and frizzle.

S5 They "weep" out additives.

S6 They melt into sludge.

S7 All of which creates huge headaches for institutions, such as museums, trying to preserve culturally important objects.

S8 The variety of plastic objects at risk is dizzying: early radios, avant-garde sculptures, celluloid animation stills from Disney films, the first artificial heart.

本段英语原文（按句分行）

全文核对后：正式重做 21-25 题

再次独立作答。只看题干和选项；需要时回原文圈出定位句。

21. According to Paragraph 1, museums are faced with difficulties in

- [A] maintaining their plastic items.
- [B] obtaining durable plastic artifacts.
- [C] handling outdated plastic exhibits.
- [D] classifying their plastic collections.

22. Van Oosten believes that certain plastic objects are

- [A] immune to decay.
- [B] improperly shaped.
- [C] inherently flawed.
- [D] complex in structure.

23. Museums stopped exhibiting some of Gilardi's artworks to

- [A] keep them from hurting visitors.
- [B] duplicate them for future display.
- [C] have their ingredients analyzed.
- [D] prevent them from further damage.

24. The author thinks that preservation of plastics is

- [A] costly.
- [B] unworthy.
- [C] unpopular.
- [D] challenging.

25. In Ferreira's opinion, preservation of plastic artifacts

- [A] will inspire future scientific research.
- [B] has profound historical significance.
- [C] will help us separate the material ages.
- [D] has an impact on today's cultural life.

5 原文 D：选项定位勾画

全篇核对应后再读一遍原文；直接圈画每道题的定位句、关键词和同义替换。

[P1] People often complain that plastics are too durable. Water bottles, shopping bags, and other trash litter the planet, from Mount Everest to the Mariana Trench, because plastics are everywhere and don't break down easily. But some plastic materials change over time. They crack and frizzle. They "weep" out additives. They melt into sludge. All of which creates huge headaches for institutions, such as museums, trying to preserve culturally important objects. The variety of plastic objects at risk is dizzying: early radios, avant-garde sculptures, celluloid animation stills from Disney films, the first artificial heart.

[P2] Certain artifacts are especially vulnerable because some pioneers in plastic art didn't always know how to mix ingredients properly, says Thea van Oosten, a polymer chemist who, until retiring a few years ago, worked for decades at the Cultural Heritage Agency of the Netherlands. "It's like baking a cake: If you don't have exact amounts, it goes wrong," she says. "The object you make is already a time bomb."

[P3] And sometimes, it's not the artist's fault. In the 1960s, the Italian artist Piero Gilardi began to create hundreds of bright, colorful foam pieces. Those pieces included small beds of roses and other items as well as a few dozen "nature carpets"—large rectangles decorated with foam pumpkins, cabbages, and watermelons. He wanted viewers to walk around on the carpets—which meant they had to be durable.

[P4] Unfortunately, the polyurethane foam he used is inherently unstable. It's especially vulnerable to light damage, and by the mid-1990s, Gilardi's pumpkins, roses, and other figures were splitting and crumbling. Museums locked some of them away in the dark.

[P5] So van Oosten and her colleagues worked to preserve Gilardi's sculptures. They infused some with stabilizing and consolidating chemicals. Van Oosten calls those chemicals "sunscreens" because their goal was to prevent further light damage and rebuild worn polymer fibers. She is proud that several sculptures have even gone on display again, albeit sometimes beneath protective cases.

[P6] Despite success stories like van Oosten's, preservation of plastics will likely get harder. Old objects continue to deteriorate. Worse, biodegradable plastics, designed to disintegrate, are increasingly common.

[P7] And more is at stake here than individual objects. Joana Lia Ferreira, an assistant professor of conservation and restoration at the NOVA School of Science and Technology, notes that archaeologists first defined the great material ages of human history—Stone Age, Iron Age, and so on—after examining artifacts in museums. We now live in an age of plastic, she says, "and what we decide to collect today, what we decide to preserve...will have a strong impact on how in the future we'll be seen."
