

2023 英语 (一) Part A · Text 4

精读全流程：原文、做题、笔译、订正、重做、选项与复读

文章主题	通读后用一句话自行概括
限时阶段	18-22 分钟：先看题干，不看选项；读文不查词
笔译阶段	按段笔译、按段核对；先写粗译，不追求参考译文式中文
重做阶段	全文核对完成后，统一重做 36-40 题
第二天	遮住译文重读、重做题、复查错因与替换词

连续干净原文用于真实检测；笔译原文用于逐段输出；原文修改页用于在英文上订正。答案与解析请对照纸质版。

限时第一读：先看 5 个英文题干，不看选项

No.	Question stem - English only	Signal
36	According to Paragraph 1, the careers of scientists can be determined by	
37	The support service consultancies tend to	
38	The function of the "milk cow" journals is to	
39	What can be learned about Scopus from the last two paragraphs?	
40	What should an author do to deal with citation manipulators?	

标出生词但不停下；标出转折 / 因果 / 让步；读到相关段落才回来看选项。

现在开始计时。此处没有结构、词义或逻辑提示；读到相应段落，就做相应题目。

[P1] Scientific papers are the recordkeepers of progress in research. Each year researchers publish millions of papers in more than 30,000 journals. The scientific community measures the quality of those papers in a number of ways, including the perceived quality of the journal (as reflected by the title's impact factor) and the number of citations a specific paper accumulates. The careers of scientists and the reputation of their institutions depend on the number and prestige of the papers they produce, but even more so on the citations attracted by these papers.

[P2] Citation cartels, where journals, authors, and institutions conspire to inflate citation numbers, have existed for a long time. In 2016, researchers developed an algorithm to recognize suspicious citation patterns, including groups of authors that disproportionately cite one another and groups of journals that cite each other frequently to increase the impact factors of their publications. Recently, another expression of this predatory behavior has emerged: so-called support service consultancies that provide language and other editorial support to individual authors and to journals sometimes advise contributors to add a number of citations to their articles.

[P3] The advent of electronic publishing and authors' need to find outlets for their papers resulted in thousands of new journals. The birth of predatory journals wasn't far behind. These journals can act as milk cows where every single article in an issue may cite a specific paper or a series of papers. In some instances, there is absolutely no relationship between the content of the article and the citations. The peculiar part is that the journal that the editor is supposedly working for is not profiting at all—it is just providing citations to other journals. Such practices can lead an article to accrue more than 150 citations in the same year that it was published.

[P4] How insidious is this type of citation manipulation? In one example, an individual—acting as author, editor, and consultant—was able to use at least 15 journals as citation providers to articles published by five scientists at three universities. The problem is rampant in Scopus, a citation database, which includes a high number of the new "international" journals. In fact, a listing in Scopus seems to be a criterion to be targeted in this type of citation manipulation.

[P5] Scopus itself has all the data necessary to detect this malpractice. Red flags include a large number of citations to an article within the first year. And for authors who wish to steer clear of citation cartel activities: when an editor, a reviewer, or a support service asks you to add inappropriate references, do not oblige and do report the request to the journal.

2.2

第一次做题：作答 36-40 题

现在才看选项。先独立完成五道题；需要时回原文定位。

36. According to Paragraph 1, the careers of scientists can be determined by

- [A] how many citations their works contain.
- [B] how many times their papers are cited.
- [C] the prestige of the people they work with.
- [D] the status they have in scientific circles.

37. The support service consultancies tend to

- [A] recommend journals to their clients.
- [B] list citation patterns for their clients.
- [C] ask authors to include extra citations.
- [D] advise contributors to cite each other.

38. The function of the "milk cow" journals is to

- [A] boost citation counts for certain authors.
- [B] help scholars publish articles at low cost.
- [C] instruct first-time contributors in citation.
- [D] increase the readership of new journals.

39. What can be learned about Scopus from the last two paragraphs?

- [A] It fosters competition among citation providers.
- [B] It has the capability to identify suspicious citations.
- [C] It hinders the growth of "international" journals.
- [D] It is established to prevent citation manipulation.

40. What should an author do to deal with citation manipulators?

- [A] Take legal action.
- [B] Demand an apology.
- [C] Seek professional advice.
- [D] Reveal their misconduct.

全文核对后：正式重做 36-40 题

再次独立作答。只看题干和选项；需要时回原文圈出定位句。

36. According to Paragraph 1, the careers of scientists can be determined by

- [A] how many citations their works contain.
- [B] how many times their papers are cited.
- [C] the prestige of the people they work with.
- [D] the status they have in scientific circles.

37. The support service consultancies tend to

- [A] recommend journals to their clients.
- [B] list citation patterns for their clients.
- [C] ask authors to include extra citations.
- [D] advise contributors to cite each other.

38. The function of the "milk cow" journals is to

- [A] boost citation counts for certain authors.
- [B] help scholars publish articles at low cost.
- [C] instruct first-time contributors in citation.
- [D] increase the readership of new journals.

39. What can be learned about Scopus from the last two paragraphs?

- [A] It fosters competition among citation providers.
- [B] It has the capability to identify suspicious citations.
- [C] It hinders the growth of "international" journals.
- [D] It is established to prevent citation manipulation.

40. What should an author do to deal with citation manipulators?

- [A] Take legal action.
- [B] Demand an apology.
- [C] Seek professional advice.
- [D] Reveal their misconduct.

全篇核读后再读一遍原文；直接圈画每道题的定位句、关键词和同义替换。

[P1] Scientific papers are the recordkeepers of progress in research. Each year researchers publish millions of papers in more than 30,000 journals. The scientific community measures the quality of those papers in a number of ways, including the perceived quality of the journal (as reflected by the title's impact factor) and the number of citations a specific paper accumulates. The careers of scientists and the reputation of their institutions depend on the number and prestige of the papers they produce, but even more so on the citations attracted by these papers.

[P2] Citation cartels, where journals, authors, and institutions conspire to inflate citation numbers, have existed for a long time. In 2016, researchers developed an algorithm to recognize suspicious citation patterns, including groups of authors that disproportionately cite one another and groups of journals that cite each other frequently to increase the impact factors of their publications. Recently, another expression of this predatory behavior has emerged: so-called support service consultancies that provide language and other editorial support to individual authors and to journals sometimes advise contributors to add a number of citations to their articles.

[P3] The advent of electronic publishing and authors' need to find outlets for their papers resulted in thousands of new journals. The birth of predatory journals wasn't far behind. These journals can act as milk cows where every single article in an issue may cite a specific paper or a series of papers. In some instances, there is absolutely no relationship between the content of the article and the citations. The peculiar part is that the journal that the editor is supposedly working for is not profiting at all—it is just providing citations to other journals. Such practices can lead an article to accrue more than 150 citations in the same year that it was published.

[P4] How insidious is this type of citation manipulation? In one example, an individual—acting as author, editor, and consultant—was able to use at least 15 journals as citation providers to articles published by five scientists at three universities. The problem is rampant in Scopus, a citation database, which includes a high number of the new "international" journals. In fact, a listing in Scopus seems to be a criterion to be targeted in this type of citation manipulation.

[P5] Scopus itself has all the data necessary to detect this malpractice. Red flags include a large number of citations to an article within the first year. And for authors who wish to steer clear of citation cartel activities: when an editor, a reviewer, or a support service asks you to add inappropriate references, do not oblige and do report the request to the journal.
